Change log

v. 1.5

- iOS SDK updates
- Compatible with iOS 12.4 and higher
- Support for Game Center
- Japanese localization
- Bug fixes
- Google SDK and Facebook SDK updated
- Facebook features available in previous versions removed

v. 1.0.1.

- Level 2 simplified
- Bug fixes preventing rare crashes on ranking screen
- Further ads optimizations
- Google SDK and Facebook SDK updated

v. 1.0.0.

GUI Improvements

- Tutorial: changing of perspective disabled in tutorial
- Progress bar initially hidden
- Description of level objectives simplified (goal + minimum)
- Floating "+1" added for all levels
- "Ask for review" functionality added for levels >= 4
- Helper arrow added for facebook login on the first run
- Save score on facebook explanation window added (+ "later" option)
- Modifications in localized strings

Ads performance optimization

- Integrated Tappx framework
- Optimized ads management

1.Overview

The Game Of Dots is a mobile game, based on old logical game played with paper and pencil. Application is available on iOS platform, for all users in all locations. Game features 10 levels of logical puzzles, 3D graphics, Game Center integration and in-app purchases described in the following chapters.

2.Technical data

Application version: 1.5

• Minimum iOS version: 12.4

• Supported devices: iPhone, iPad (all models supported by iOS 12.4 or higher)

Default (development) language: English

• Localizations: Polish, Spanish, Russian, Japanese

3. Game rules

3.1. Game origins

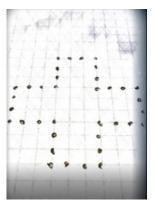

The original game starts with a dotted shape drawn on a sheet of squared paper.

In a single move, player adds one (and only one) dot in line with four existing dots and joins all five (and only five) dots with a line. Adding new dots creates new opportunities for further moves and on the other hand, blocks some moves.

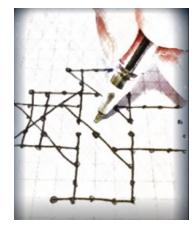

If user has more than one option of joining dots (i.e. more than one direction or more than 5 dots in row) he has to make a choice which 5 dots to join with a line.

Every line means one point.

The goal of the game is to score as many points as possible.

3.2. Digital version

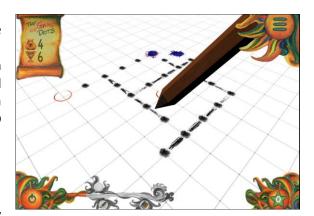

Digital version of the game follows the original rules.

Game features 10 levels of puzzle with various starting shapes, additional level objectives (player has to get to the certain point of the board), and various 3D locations.

Story

By playing the game, user helps friendly dragon Albert, to bring back the colors to his world.

Albert's world is symbolized by the sketch in the background of main screen. As the player achieves the levels, sketch gets shapes and colors.

Scores and levels

Every level has two significant score values:

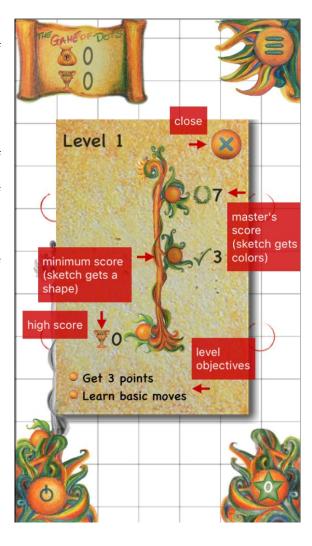

- Master's score: is the amount of points user has to collect to accomplish the level. If reached, level background gets full colors and the next level is unlocked without restrictions.
- Minimum score: is the amount of points user has to collect to get a chance for unlocking next level. If reached, the level background is painted in shades of grey.

In such case user can unlock next level by watching reward video (if available) or by improving his score in previous level.

If user has purchased "No Ads + Undo" package next level is unlocked without watching reward video.

If level has additional level objectives, they all must be met to advance to the next level.

If user reaches the required score but doesn't meet additional level objectives, his score is reduced to the minimum score, but next level remains locked.

4. User interface

4.1. Main Screen

The main screen shows the currant game status.

Background sketch symbolizes Albert's world.

Accomplished levels (user reached the master's score) have colorful background.

Levels not accomplished but with minimum score reached are painted grey.

Levels available for playing or unlocking are marked with parchment icon.

Levels locked do not have background nor parchment icon aside.

At the bottom bar following icons are located:

- Sound icon: controls game sound (on/off)
- Avatar icon: shows user's Game Center profile picture. If tapped opens the ranking screen.
- User's score and achievements icons showing:
 - User's total points
 - Number of passed levels
 - Number of accomplished levels

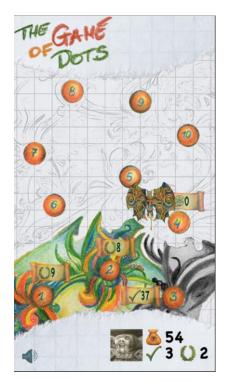

If main screen extends over visible frame it can be shifted with the pan gesture.

Tapping the dragon brings him to front and sends back. Each time brought to front, Albert tells a message related to the level played, next levels or game features.

Albert's role is to help user to understand the game objectives and functions.

When user taps on the level number, and level is available for playing, the game play screen is loaded.

See section 4.5 for the list of main screen symbols and icons.

4.2. Game play screen

Tutorial and help

Level one is the tutorial.

The objective of this level is to explain the basics of the game to the user.

Each move is commented with a helper text located at the bottom of the screen.

Following instructions, user learns the rules of the game.

During the game user can always use help dialog.

It is displayed when user taps the help icon available in menu (see section 4.4).

Help screen shows all icon and symbols displayed by the game and explains their meaning.

Each game starts with the level intro screen.

Level intro screen shows the level objectives, minimum score, master's score as well as the best score achieved so far by the user on certain level.

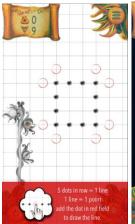

Closing the level intro screen with icon starts the game.

Game play

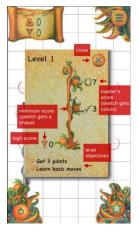

Levels bring user to various locations.

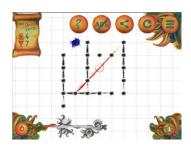

The symbols and playing environment varies, but the rules of the game are always the same. First two levels show simple, squared paper board with dots to make user accustomed to the basic rules.

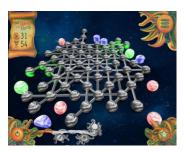

Other levels take place in different 3D scenes where dots and lines are replaced by flowers, balls and other items.

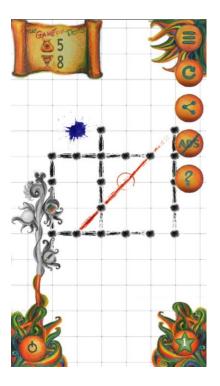

The game screen always contains constant elements:

- **Game board**, located in the upper left corner shows actual score and the high score
- Menu icon, located in the upper right corner of the screen. Tapping menu icon toggles game menu (see section 4.4)
- Progress bar, located in the bottom left corner of the screen. Progress bar gets colored as the user scores the points. It also shows the minimum score, master's score and high score icons.

Progress bar can be switched on and off by

the button located at the bottom left corner of the screen.

 Collected items indicator, located at the bottom right corner of the screen. Green star shows the number of items collected during the game.

Pan, zoom and perspective

User can shift and zoom the game scene using common gestures.

Tapping the screen twice changes perspective.

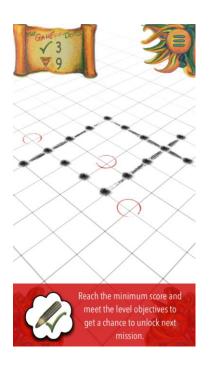

Making moves

To make a move user has to locate four dots in line and add the dot next to them.

The game helps user with this task showing the places where new dot can be placed.

Possible moves are marked by red circles in the first two levels and by various items in other levels.

When user taps the marked place new dot is added to the board and connected to other dots with a new line.

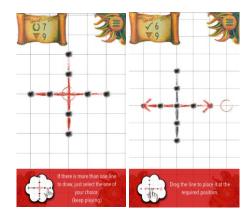

Choosing directions and options

If the user can join 5 dots in more than one direction, possible choices are marked red. To make the choice user taps the line he wants to draw.

If there are more than 5 dots in line, user has to make a choice which 5 dots he wants to join.

Moving red line appears on the screen showing available options. User taps the line to stop it and then drags the line to the desired destination.

Another tap at the line confirms the choice.

Game over screen

When there is no more moves left, the game is over. Game over screen appears on the screen.

It shows user's score, progress bar and status of level objectives. If the level objective is not met – it is marked red.

The progress bar colors show the player's score compared to the minimum score, master's score and level best score.

Closing this window makes the game do display ad and return to main screen.

4.3. Ranking screen

Ranking is loaded when user touches avatar icon on the main screen.

It shows current leaderboard from Game Center. The content of leaderboard can be limited to player's friends or extended to all players. The switch is available in Settings.

Leaderboard view can be scrolled if extends the visible frame.

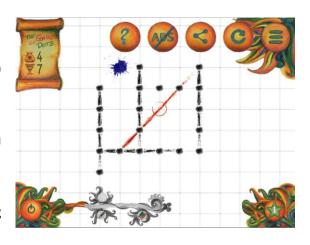

4.4. Menu

Game menu appears on ranking screen (see 4.3) and game play screen (see 4.2) and is symbolized by icon in the upper right corner.

Tapping the menu icon shows or hides menu items.

The set of menu items depends on the context. Full set of menu items is explained in the following table:

Menu icon	Description	Ranking Screen	Game Screen
	Menu icon: shows / hides menu items	Х	Х
C	Back icon: return to main screen	X	Х
	Share icon: opens the Settings dialog for the game	Х	
APS	No Ads icon: initializes in-app purchase of 'No-ads + Undo' package (see 5.2) or restores past purchase. If item is purchased icon is not displayed.		Х
	Undo last move icon: reverts last move . Available when user purchased 'No-ads + Undo' package (see 5.2). If the last move was already undone icon does not appear in menu.	х	
2	Help icon: shows Help screen (see 4.2)	X	
	Purchase icon: displayed by purchase dialog		
G3	Restore icon: restores past purchase transactions		

4.5 Main screen symbols and icons

Symbol	Description
	Parchment icon. Appears beside the level when it was played, can be played or can be unlocked.
O	Mission accomplished . Level was passed and the master's score has been reached.
\checkmark	Level passed , but the master's score has not been achieved.
	Reward video. Level can be unlocked by watching reward video.
1000	High score icon. Symbolizes best result achieved on certain level.

5. Additional game features

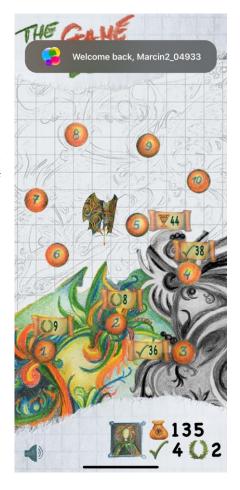

5.1. Game Center integration

Application integrates with Game Center to let users enjoy both game's and Game Center's features.

The game is trying to connect to Game Center, using standard iOS functionality, at the moment of launch.

When successfully connected, the game displays leaderboards loaded from Game Center and changes the avatar icon to player's Game Center avatar.

icon in the menu of the leaderboard screen allows user to open game settings and decide whether to show only friend's scores or scores of all players.

5.2 In-App purchases

"No Ads + Undo" package

The downloadable version of the game displays ads (see 6.) and **does not** offer "undo last move" functionality.

"No Ads + Undo" package is a non-consumable item that can be purchased in App Store from the game.

When the user purchases "No Ads + Undo package" the game stops displaying the ads and unlocks "undo last move" functionality.

Both items are joined in one package and purchased together.

The game remembers the purchase as long as it is installed. If uninstalled and installed again or installed on another device with the same Apple ID, the game will **restore past purchase and unlock functionalities without additional charges,** when user taps "Purchase / Restore" icon.

Separate "Restore" button was implemented to let users restore past purchase, however even if user attempts to buy the package for the second time, the game will try to restore past transactions before it comes to payment.

The game checks user payment permissions before the purchase transaction is committed.

6. Advertisement

Standard version of the game displays ads in the following situations:

- Banner on ranking screen
- Interstitial add at the end of each game
- Reward video, when the user did not reach the master's score on the certain level and wants to unlock next level

Ads can be completely switched off by purchasing "No Ads + Undo" package (see 5.2)

Reward videos and other ads are the subject of availability and there is no guarantee they will be available in certain location or time.

If user experiences problems with ads, he should check advertising settings on the device in: Settings > Privacy > Advertising.

7. Network connection

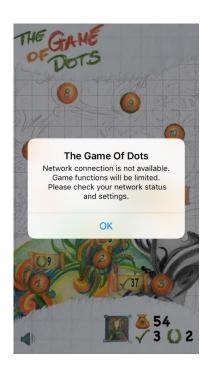

The game requires network connection to operate with its full functionality. When the network connection is not available user can play the game but functionalities are limited to those that not require network access.

The game handles network and connection issues displaying appropriate information to the user.

When network connection is not available following functionalities will not be available:

- Game Center features (see 5.1)
- Functionalities related to advertisement (including reward videos)
- In-App purchases (see 5.2)

However all the levels can be played without network access.

8. Additional game resources

For additional resources and information about the game visit game websites:
